

Compatibility Mode

There are two ways to have a user enter the Internet Browser into Compatibility Mode

Method One

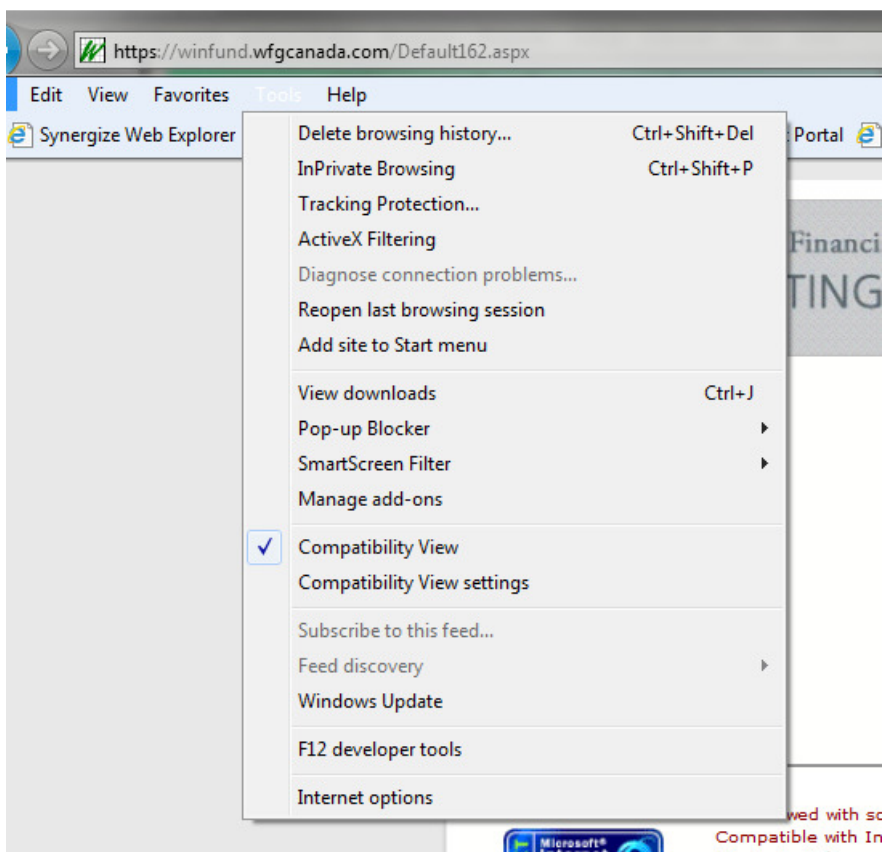

Click the Compatibility mode icon in the address bar at the top of the page

Sometimes the icon is not visible, if not use

Method Two

Have the user click on tools from the menu bar and select Compatibility settings

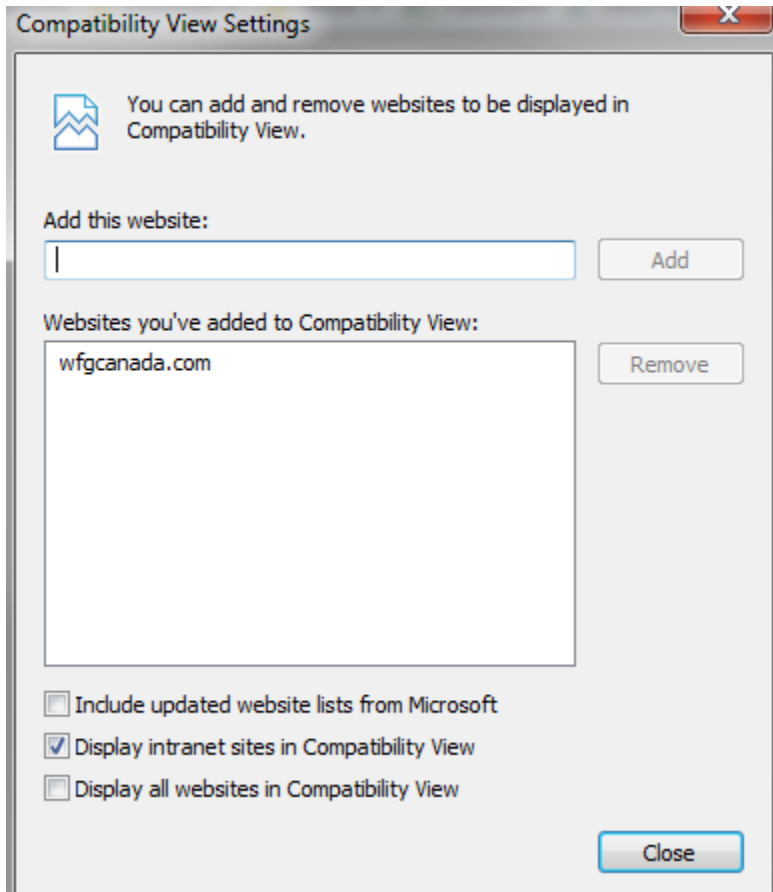

A popup menu will appear (See below)

In the add this website field enter “wfgcanada.com” and click the add button

The website will then be listed in the field “Websites you’ve added to Compatibility View”

Once that is complete click OK

On the current visit and all future visits to the W.Connect website it will be loaded using compatibility mode.
